

BENEFITS

WinMedical's innovative solutions increase the **efficiency and effectiveness** of clinical workflows in non-critical care hospital settings and at home. WinPack reduces the average time of hospitalization and improves the quality of life of Patients while cutting hospital costs. WinPack is the perfect tool to support the medical staff day-to-day activities.

70% of hospitalized patients are hosted in low-acuity settings representing millions of hospital-beds. Up to 20% of those patients are at risk of adverse events such as increased morbidity and mortality due mainly to undetected clinical deterioration.

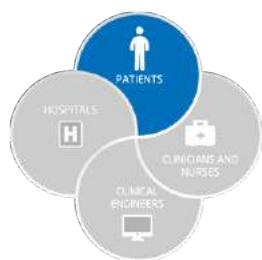

WinPack allows Nurses and Clinicians to continuously monitor the most important vital signs of patients in real-time when hosted in low-acuity settings.

Continuous and real-time monitoring allows Clinicians to make **faster, better and more accurate clinical decisions** - especially when signs of early deterioration appear. There is one simple yet noteworthy reason behind the success of the WinPack device: **it's been thought and designed, from the start, to benefit all key players in a medical care environment.**

BENEFITS FOR PATIENTS

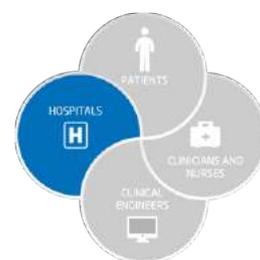

WinPack is comfortable to wear, easy to use, lightweight and allows a better and safer hospital experience for Patients in low-acuity areas who are able to move freely while wearing it. The reduction of manual checks improves their comfort and rest. The Device is non invasive and barely noticeable for the Patient whilst worn. The monitoring of Patient body position is key to Patient safety, reducing the risk of pressure ulcers and Patient falls.

BENEFITS FOR HOSPITALS

WinPack is the ultimate solution for hospitals aiming at achieving **prime quality of care** and concurrent cost reductions.

The use of WinPack makes continuous vital signs monitoring possible in non high-acuity units despite the notoriously high workload of medical staff.

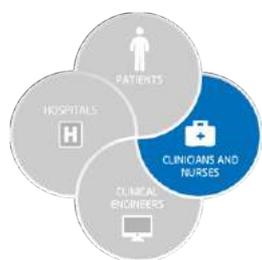

WinPack makes reducing Patient ICU length of stay easily achievable, without compromising cost efficiency and Patient safety.

BENEFITS FOR CLINICIANS AND NURSES

WinPack enables continuous monitoring of all Patients whilst also **significantly reducing the risk of medical professional liability**. By connecting Doctors, Nurses and Patients, WinPack improves the quality and turnaround time of the care of all Patients in hospital and at home whether in bed or out of bed.

WinPack's process automation removes the risk of human error by providing real time information which is immediately saved to hospital servers and is available for re-call at any time for review and documentation.

BENEFITS FOR CLINICAL ENGINEERS

WinPack is designed to leverage and easily integrate with pre-existing software platforms and IT infrastructures using Wi-Fi or Bluetooth technology. The modular solutions are **easy to deploy and integrate**. In addition, thanks to its modularity, WinPack requires very low technical maintenance. Its 'plug and play' design means that the addition, replacement or removal of sensor modules requires no expert assistance.
