

CASE STUDY

ADOPTION OF WIN@HOSPITAL WITHIN THE DEPARTMENT OF INTERNAL MEDICINE, PONTEDERA HOSPITAL, PISA – ITALY

**144 Patients involved over a period of
6 months for a total of 662 days of monitoring**

CLINICAL BENEFITS

- ✓ **Early detection of Patient deterioration** through real-time monitoring and alarms resulting in a more pro-active level of care and reduction in ICU transfers
- ✓ **Reducing the clinical risk** by providing real-time and continuous monitoring
- ✓ **Improved care** co-ordination and communication among all departments and medical staff
- ✓ **More effective clinical decision-making** and improved outcomes
- ✓ **Reducing litigation risk** by enabling accurate recording and documenting of patient data
- ✓ **Prompt and effective patient's analysis** through the set up of individualised alerts

ECONOMICS BENEFITS

- ✓ Reducing **hospitalization days**
- ✓ Reducing **Nurses' workload** in measuring vital signs and enabling more efficient use of clinician time through process automation
- ✓ Reducing **avoidable ICU transfers**
